## Public sector finances December 2010

**Date:** 25 January 2011

**Coverage:** United Kingdom **Theme:** The Economy

**Produced jointly with HM Treasury**

For the first time data for Royal Bank of Scotland and Lloyds Banking Group have been fully incorporated into the public sector finances. This has impacted considerably on the measure of public sector net debt that includes the effects of the financial interventions. It has not materially affected the measures excluding temporary effects of the financial interventions, that are used by HM Treasury for the purpose of fiscal policy and are the measures that are forecast by the Office for Budget Responsibility.

Provisional estimates of the public finances show that the public sector had:

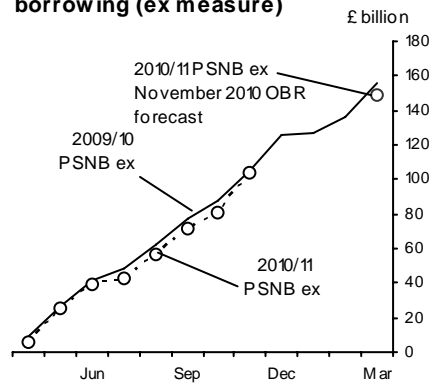

- **a current budget deficit excluding the temporary effects of financial interventions of £13.5 billion in December 2010** (a deficit of £11.6 billion including interventions)
- **net borrowing excluding the temporary effects of financial interventions of £16.8 billion in December 2010** (£15.3 billion including interventions)

and at the end of December 2010:

- **net debt excluding the temporary effects of financial interventions was £889.1 billion, equivalent to 59.3 per cent of gross domestic product** (£2322.7 billion, equivalent to 154.9% including interventions)

The measures excluding the temporary effects of the financial interventions are used by the Office for Budget Responsibility to forecast the public finances and by HM Treasury for the purposes of fiscal policy.

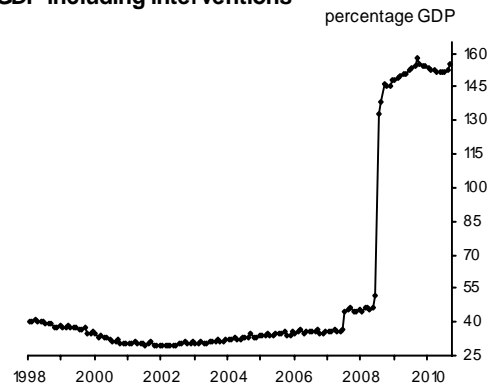

**Cumulative public sector net borrowing (ex measure)**

**Net debt as a percentage of GDP excluding interventions**

**Net debt as a percentage of GDP including interventions**

**Central government current expenditure**

## Main Statistics

The main statistics released show, that in December 2010:

For measures **excluding financial interventions**:

the **public sector current budget** was in **deficit** by **£13.5 billion**; this is a **£0.7 billion higher** deficit than in December 2009, when there was a **deficit** of **£12.8 billion**;

**public sector net borrowing** was **£16.8 billion**; this is **£4.2 billion lower** than in December 2009, when net borrowing (excluding financial sector intervention) was **£21.0 billion**;

**public sector net debt** at the end of December 2010 was **£889.1 billion (59.3 per cent of GDP)** **up** from **£743.5 billion (52.2 per cent of GDP)** at the end of December 2009.

For measures **including interventions**:

the **public sector current budget** was in **deficit** by **£11.6 billion**; this is a **£1.1 billion higher deficit** than in December 2009, when there was a **deficit** of **£10.5 billion**;

**public sector net borrowing** was **£15.3 billion**; this is **£1.0 billion higher** net borrowing than in December 2009, when net borrowing was **£14.3 billion**;

**public sector net debt** at the end of December 2010 was **£2322.7 billion (equivalent to 154.9 per cent of GDP)**. This compares to **£2248.4 billion (157.9 per cent)** as at the end of December 2009.

The **public sector net cash requirement** (see table PSF4) was **£25.5 billion**, a **£2.2 billion higher** net cash requirement than in December 2009, when there was a net cash requirement of **£23.3 billion**.

## Financial year to date (April 2010 – December 2010)

Monthly data can be volatile, so it can be misleading to read too much into one month's data. The following paragraphs give information on the financial year to date and comparisons with the corresponding period of the previous financial year.

For measures **excluding financial interventions**:

the **public sector current budget** was in **deficit** by **£94.3 billion**; this is **£2.5 billion lower** than in the same period of 2009/10, when there was also a **deficit** of **£96.8 billion**;

**public sector net borrowing** was **£118.4 billion**; this is **£8.4 billion lower** net borrowing than in the same period of 2009/10, when net borrowing was **£126.8 billion**;

For measures **including interventions**:

the **public sector current budget** was in **deficit** by **£78.3** billion; this is a **£1.0** billion **lower** deficit than in the same period of 2009/10, when there was a **deficit** of **£78.3** billion;

**public sector net borrowing** was **£105.4** billion; this is **£1.3** billion **higher** net borrowing than in the same period of 2009/10, when net borrowing was **£104.1** billion;

The **public sector net cash requirement** (see table PSF4) was **£76.2** billion, a **£87.4** billion **lower** net cash requirement than in the same period of 2009/10, when there was a net cash requirement of **£163.6** billion.

## Revisions

For measures excluding financial interventions:

Revisions have reduced Public Sector Net Borrowing (PSNBex) for November 2010 by £2.2 billion. This stems from downward revisions of around £1.1 billion to both Local government net borrowing and Central government net borrowing respectively. The revision to Central Government borrowing were driven by downward revisions to Central government expenditure and net investment, which were partially offset by downward revisions to Central government receipts.

PSNBex for April-November 2010 has been revised down by £2.8 billion, driven primarily by a downward revision of £2.2 billion to Central government expenditure. There have also been revisions to PSNBex for earlier periods going back to 2007. PSNBex has been revised upwards on a cumulative basis by £1.0 billion over the years 2007-8 to 2009-10.

There have been revisions to Public Sector Net Debt (PSNDex) back to 2007. From December 2009 onwards these revisions have been de minimis.

Revisions to PSNBex and PSNDex as percentages of GDP in the current financial year are in part driven by revisions to GDP. These revisions have not taken into account today's preliminary estimate for 2010 Q4 GDP.

For measures including financial interventions:

PSNB for November 2010 has been revised downwards by £3.1 billion. Revisions to PSNB are in part due to receipt of updated data, but are also a consequence of the introduction this month of new data for public sector banking groups

PSND at end November 2010 has been revised upwards from £971 billion (equivalent to 65.2% of GDP) to £2274.2 billion (equivalent to 152.2% of GDP). Revisions to PSND are driven almost entirely by the inclusion of additional data for public sector banking groups.

## Background notes

### Data Quality

1. A summary quality report for the public sector finances can be found at: [www.statistics.gov.uk/articles/nojournal/PSF\\_for%20web.pdf](http://www.statistics.gov.uk/articles/nojournal/PSF_for%20web.pdf). This report describes in detail the intended uses of the statistics presented in this publication, their general quality and the methods used to produce them.

### Publication of data for all public sector banking groups and the Bank of England

2. On 19 February 2009 ONS announced the classification of Royal Bank of Scotland and Lloyds Banking Group as public corporations from 13 October 2008. Data for these two banking groups are fully incorporated into the public sector finances for the first time in this statistical bulletin. The classification to the public sector applies not only to the banking institutions, but to all UK registered companies within the two groups. Financial data encompassing the activities of all such companies, including mergers and acquisitions, are incorporated into series for the public sector banking groups, which are presented for the first time in this bulletin (see Tables PSF1 and PSF2), and into aggregates that include the temporary effects of financial interventions. Payments associated with the operation of the Bank of England Asset Purchase Facility Fund (BEAPFF) and Special Liquidity Scheme (SLS) are also included in the series for the public sector banking groups, as are data for Northern Rock plc, Northern Rock (Asset Management) plc, and Bradford and Bingley plc. Data for the public sector banking groups, incorporating the BEAPFF and SLS flows, are excluded from fiscal aggregates that exclude the temporary effects of financial interventions. The measures excluding temporary effects of the financial interventions are not materially affected by the full inclusion of data for Lloyds Banking Group and Royal Bank of Scotland. An article providing commentary on inputs to the public sector banks series, the sources of the data, processing methodologies, and the impacts on key aggregates is available at: <http://www.statistics.gov.uk/StatBase/Product.asp?vlnk=805&Pos=&ColRank=1&Rank=422>
3. The Bank of England is also classified to the public sector. Previously data for the Bank has been included within series for public corporations in the public sector finances. For the first time data for the Bank are presented separately in this bulletin. The data are ONS estimates derived from the Bank's published accounts.

## Classification issues concerning financial interventions

4. There have been numerous financial interventions in recent years. These are described in an article that was published on 6 November 2009: [www.statistics.gov.uk/cci/article.asp?ID=2301](http://www.statistics.gov.uk/cci/article.asp?ID=2301). The article also explains the classification of the institutions and transactions associated with these measures in the UK's National Accounts and Public Sector Finances. This follows consultation with Eurostat, the Statistical Office of the European Union, to ensure consistent interpretation of the international guidance.

## Impact of financial interventions

5. A measure of public sector borrowing that excludes the effect of temporary financial interventions, PSNB ex, was announced in the 2009 Pre Budget Report. The definition of the parallel measure of net debt, PSND ex, was also aligned. Both measures have been published at end quarters. The impact of financial interventions on public sector net borrowing (PSNB) over quarterly periods is summarised in the following table. Monthly series for PSNB ex and PSND ex and the public sector current budget on an excluding basis are also provided in this bulletin (see Table PSF1). An article that explains the calculation of PSNB ex and PSND ex is available at: [www.statistics.gov.uk/cci/article.asp?ID=2380](http://www.statistics.gov.uk/cci/article.asp?ID=2380).

### Reconciliation of PSNB and PSNB ex

Depreciation	-0.5	-0.4	-0.4	-0.4	-0.4	-1.0	-1.9
Net investment	4.3	-1.3	-1.3	-1.3	-1.3	10.2	2.9

## Definitions

6. A guide to monthly public sector finance statistics is available from [www.statistics.gov.uk/downloads/theme\\_other/GSSMethodology\\_No\\_12\\_v2.pdf](http://www.statistics.gov.uk/downloads/theme_other/GSSMethodology_No_12_v2.pdf). It explains the concepts and measurement of the monthly data, plus those previously published, and gives some long runs of historical data. The following background notes explain the monthly data.
7. The current budget is defined as net saving plus receipts of capital taxes, using National Accounts concepts as set out in the *European System of Accounts 1995* (ESA95). For central government, monthly estimates of the current budget are obtained directly from data on transactions in current receipts and expenditures. For local government and public corporations, the current budget is obtained by subtracting net borrowing from an estimate of net investment. Net borrowing is consistent with the definitions in ESA95; procedures for calculating it are discussed in the methodological guide. Net investment is defined as investment less depreciation. Investment is capital formation (acquisition of fixed assets, stocks and valuables net of any sales) plus net payments of capital grants.
8. Public sector net debt (PSND) is calculated as financial liabilities less liquid assets with both scored at face value.  
Liquid assets mainly comprise foreign exchange reserves and bank deposits. Public sector holdings of public sector debt are consolidated out.  
The public sector net cash requirement is, approximately, the flows equivalent of the PSND.
9. The GDP figure used in the denominator for the calculation of fiscal aggregates as a percentage of GDP is the 'not seasonally adjusted' current price version. For the net debt ratio, the GDP denominator covers the 12 months centred around the observation, e.g. six months before and six months after it. For the current budget and net borrowing financial year ratios, the GDP denominator covers the financial year. These calculations require estimates or forecasts of GDP to be available for up to six months in the future. This estimation procedure is explained in detail in an article, *The use of GDP in fiscal ratio statistics*, available at: [www.statistics.gov.uk/about/methodology\\_by\\_theme/public\\_sector\\_accounts/downloads/Use\\_of\\_GDP.pdf](http://www.statistics.gov.uk/about/methodology_by_theme/public_sector_accounts/downloads/Use_of_GDP.pdf). As a result of this estimation procedure the debt ratio is provisional when first published and subject to later revision when outturn GDP first becomes available, and again when more refined estimates of GDP are published.

## Relevance to users

10. The interim Office for Budget Responsibility (OBR) was launched by the Chancellor of the Exchequer on 17 May. As set out in its Terms of Reference, the OBR will produce independent forecasts of the public finances and the economy to inform fiscal policy decisions. The Chancellor has said he will use the forecasts to inform the Government's policy decisions.

11. The OBR's Economic and Fiscal Outlook (November 2010) gave the following forecasts (excluding temporary effects of financial sector interventions) for the financial year 2010/11:
- public sector current budget: a deficit of **£106 billion**;
  - public sector net borrowing of **£149 billion**; and
  - public sector net debt: **60.9** per cent of GDP at end March

## Coherence

12. The Public Sector Finances differ from other National Accounts data in that they have a more flexible revisions policy. The most up to date information is used in the PSF for all time periods and revisions can be included for all time periods in each bulletin. This means that the PSF data may be inconsistent with the published GDP data and sector and financial accounts, as a revision may not be incorporated into the main National Accounts data set until a later date due to the more restrictive revisions policy

13. General government net borrowing reported in this bulletin forms the basis of the reports of Government Deficit under the Maastricht Treaty. This was most recently reported on in September 2010 at: [www.statistics.gov.uk/pdfdir/maast0910.pdf](http://www.statistics.gov.uk/pdfdir/maast0910.pdf).

The definition of general government net borrowing to be reported for the Excessive Deficits Procedure is different to that used for National Accounts. A regulation requires that payments on *swaps* are treated as interest payments; for all other purposes, including the national accounts and the *Public Sector Finances Statistical Bulletin*, such payments are shown as financing items, consistent with ESA95. The definitions of the deficit also differ in the treatment of the government's receipts for allowing the use of spectrum by third generation mobile phone companies. UK interpretation of ESA95 is to treat these receipts as rents, whereas Eurostat requires that, for the Excessive Deficits Procedure, they are reported as the sale of assets.

## Accuracy

14. **Central Government** departmental expenditure data are subject to various validation processes and improve over time. They go through four main stages:
- stage 1 – initially, they are estimated using in-year reported data;
  - stage 2 – in the July following the completion of the financial year the *Public Expenditure Outturn White Paper* is published, which gives department's updates of full financial year estimates, but no in-year profile;
  - stage 3 – following the autumn publication of OBR's Economic and Fiscal Outlook these financial year estimates are updated;

- stage 4 – at the time of the *Budget Report* the following year the *Public Expenditure Statistical Analyses* are published and the financial year estimates are further improved. The departmental accounts will have been audited by this stage.

Data for 2008/09 are at stage 4

Data for 2009/10 are at stage 2, while data for 2010/11 are at stage 1.

15. The local government data for 2008/09 for local authorities are based on final outturns for receipts and expenditure. Expenditure data for 2009/10 onwards are based on either provisional estimates or forecasts and are subject to revisions when final outturn data become available.

## Revisions

16. Table PSF10R presents the latest revisions to key aggregates. The largest revisions normally occur in the month following first release, when estimated and provisional data are replaced with firmer information. The incorporation of data for Royal Bank of Scotland and Lloyds Banking Group over the period commencing October 2008 has led to major revisions to certain series that include the effects of financial interventions, in particular public sector net debt series, *RUTN* and *RUTO*. Series incorporating data for the public sector banking groups are based on data reported to the Bank of England and ONS for periods up to June 2010. Values for months from July 2010 onwards are imputed ONS estimates and these may be revised substantially when new data become available in March 2011.
17. One indication of the reliability of the key indicators in this bulletin can be obtained by monitoring the size of revisions. The table below shows summary information on the size and direction of revisions from first publication to one year later. The average of five years worth of such revisions is shown (for example – from those first published in December 2004 (for November 2004) to November 2009 first estimates). Please note that these indicators only report summary measures for revisions, the revised data may still be subject to measurement error.

Summary Table of Revision Indicators

	Latest monthly value	Revisions between first publication and estimate twelve months later	
		Average over the last five years	Average over the last five years (average absolute revision)
Current Budget, £m (ANMU)	-11,630	104.78	1,249
Net borrowing, £m (-ANNX)	15,305	-278	1,283

18. A statistical test is applied to the average revision to determine whether it is statistically significantly different from zero. An asterisk (\*) is used to indicate if a mean revision has been found to be statistically significant. A spreadsheet giving these estimates and the calculations behind the averages in the tables is available on the National Statistics website at

[www.statistics.gov.uk/statbase/Product.asp?vlnk=805](http://www.statistics.gov.uk/statbase/Product.asp?vlnk=805)

More information about the revisions material in this Bulletin can be found on the National Statistics website: [www.statistics.gov.uk/cci/article.asp?ID=793](http://www.statistics.gov.uk/cci/article.asp?ID=793)

### Publication policy

19. Complete runs of series in this Bulletin are available to download free of charge at [www.statistics.gov.uk/timeseries](http://www.statistics.gov.uk/timeseries). Alternatively, for low-cost tailored data call Online Services on 01329 444366 or email [statbase@statistics.gov.uk](mailto:statbase@statistics.gov.uk). Data underlying the graphs in the Statistical Bulletin are available on request.

An electronic dataset is normally made available three working days after publication of the *Public Sector Finances Statistical Bulletin*.

The dataset contains quarterly data consistent with the latest *Public Sector Finances Statistical Bulletin*, analysed by economic category and sub-sector. The dataset is available at: [www.statistics.gov.uk/downloads/theme\\_economy/PSF\\_Supplementary\\_Data.xls](http://www.statistics.gov.uk/downloads/theme_economy/PSF_Supplementary_Data.xls)

20. Details of the policy governing the release of new data are available from the National Statistics press office. Special arrangements apply to the Public Sector Finances, which is produced jointly with HM Treasury. A list of ministers and officials with pre-publication access to the contents of this bulletin is available on request. In addition some members of the Treasury's Public Sector Finances (PSF) team will have access to them at all stages, because they are involved in the compilation or quality assurance of the data, and some members of the Treasury's Communications team will see the bulletin, but only within the 24 hour pre-release period, because they place the data on the website.
  
21. National Statistics are produced to high professional standards set out in the National Statistics Code of Practice. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference.
  
22. The ONS consultation on its work programme for the next four years closed on 24 December 2010. ONS is currently considering responses to the consultation.

**List of tables in this bulletin****Public Sector Finances**

- PSF1. Public Sector Summary Balances
- PSF2. Public Sector Net Borrowing

Relationships between columns 1+6+7=8; 9+10+11=12; 12-8=13

1 Comprises payments into the Consolidated Fund and all payovers of NICs excluding those for Northern Ireland.

2 Income tax includes capital gains tax and is net of any tax credits treated by HM Revenue and Customs as tax deductions.

3 UK receipts net of personal pension rebates; gross of Statutory Maternity Pay and Statutory Sick Pay.

4 Payments into Consolidated Fund.

5 Including some elements of expenditure not separately identified.

6 Mainly comprises privatisation proceeds.

7 Net of certain receipts, and excluding on-lending to local authorities and public corporations.
