Awarded $1.6 Million Grant
Among the things I love about New England are the changing seasons. Each season brings with it a new perspective on life and new challenges for living. For me, each new season serves as a reminder that change can be revitalizing, full of uncertainty and possibility, and an opportunity to recapture the excitement of our goals and mission.

As a parent, I am reminded often that change is an essential part of growing. I have grown and changed with my daughters as they make the transition from childhood to young adulthood. It hardly seems possible that they are each taking on the mantle of career and profession. Wasn’t it only yesterday that we were changing their diapers and bundling them up against the cold?

As Dean I am a daily student of change, especially lately. We have the changing health care scene, changing policies at both the state and federal levels, and the changing climate for higher education in the USA. YSN will literally be changing locations this summer. I hope to bring you specific news of our new building at Alumnae/i Weekend and in the next issue of Yale Nurse. We will use our anticipated relocation as an opportunity to review our programs, our structure, and our progress toward the goals expressed in our strategic plan. In other words we, too, will change and hopefully ahead of the tide!

It should come as no surprise to you, then, that the theme of this year’s Alumnae/i Weekend is change. We will assemble a group of experts, people who watch change and make change happen, who will explore the implications of policy, legislative, market-place, and health care change for advanced practice nursing. As is often the case, many of the experts come from among us YSNers. In preparing you to lead we have prepared you to manage change. I hope many of you will be able to join us in June!

Some things never change. The talent of our students, the wisdom of our faculty and the abiding loyalty and accomplishments of our alumnae/i are ever present markers of the excellence which is YSN. As we anticipate the changes ahead for nursing and for YSN I know I can always call on you for support and advice and I know that when I call, you answer. During this holiday season, when people take time to count their blessing, please know that I consider myself well blessed to be in your company!
1994-95 Is A Year Of Change

Many exciting changes have been implemented this 1994-95 academic year, as YSN continues to be a leader in nursing education and research. The Doctor of Nursing Science Program is well under way; the Nursing Management and Policy Program (formerly Nursing Systems and Policy) continues to develop its programs of study to include a direct entry Home Care and Community Health Administration Program; two post master's certificate programs have been initiated, Adult Nurse Practitioner and Pediatric Nurse Practitioner; and there are now three options available to complete the major research project required for graduation, a master's thesis, a research proposal, and a research utilization project. Last but not least was the Dean's decision to increase the size of the class for the Program for Non-Nurse College Graduates from 32 to 42, and to increase each of the practitioner and midwifery specialty programs by three fulltime places, as well. This means a total student body of 234, the largest ever in the history of the School.

To meet the needs of master's prepared clinical nurse specialist advanced practice nurses desiring formal education and clinical training in primary care, the School has opened Adult and Pediatric Post Master's Certificate Programs. The need for more advanced practice nurses in areas of primary care, coupled with the shift in emphasis in the health care arena onto primary care, makes this a timely and important addition to the master's preparation already available. Both are part-time programs and include those courses which are required for eligibility for taking national certification examinations. Application materials are available from the Student Affairs Office at the School.

After an in depth look into the purpose of the research experience within master's level education, the faculty voted to offer a research praxis allowing each student to select one of three options. Each option (a thesis, research proposal, or research utilization project) entails equivalent breadth and depth of study, but with different emphases. The availability of a choice recognizes the different kinds of experiences that master's students will be expected to deal with in their clinical practice. "The key here is that a choice recognizes the full range of research opportunities our students will be involved in after graduation," states Margaret Grey, Associate Dean for Research and Doctoral Studies, "and allows them to tailor the research praxis to their specific career goals."

Alumnae/i Directory Update

Barbara Reif, Director of Student and Alumnae/i Affairs

The 1994-95 YSN Alumnae/i Directory will be mailed to those of you who have ordered one shortly after the beginning of the new year. As you know, such a project entails an enormous amount of work and in an effort to supply you with the most updated and accurate version, University Publishing Corporation and I are double checking all data carefully. A directory is always outdated even as it is being printed, but we are hoping that this edition will be useful to our alumnae/i. Thank you for your patience.

If you did not order a copy initially - what is now a year or so ago - you still can by contacting University Publishing Corporation, P.O. Box 1311, 310 South Washington Street, Bloomington IN 47401. A $15.00 donation is requested and be sure to mention Yale School of Nursing.
This year’s first meeting of the Yale School of Nursing Board of Directors was held at Dean Judy Krauss’s home in Killingworth, CT. For the past two years Judy has opened her lovely home to the group for a picnic and the opportunity to plan for the upcoming year. This year’s Board is planning reunions as usual, but is also organizing an all day career workshop to be held on January 28, to offer graduating students the opportunity to participate in mock interviews, to write or revise resumes or CVs, to learn about negotiating for a job and how to think about benefits, and to learn where to find out about job opportunities. It is hoped that with all the experience and expertise available in our alumnae/i group that the effort will benefit students as they begin to think about job hunting after graduation. Any suggestions or help in setting up the day’s program would be appreciated and can be directed to Barbara Reif in the Student and Alumnae/i Affairs Office.

Doctoral Program Up and Running Smoothly

Good care and a quick cure are what most patients want, but if a quick cure is not forthcoming, good care can help determine how well patients cope with their conditions. A doctoral program launched this fall at the School of Nursing is preparing a new generation of nurse researchers to seek better ways to provide that care.

Unlike doctoral programs at some nursing schools which train nurses to serve as hospital administrators, the goal of Yale's Doctor of Nursing Science Program is to produce nurse scholars who combine clinical practice with research into issues relevant to the practice of nursing, says Margaret Grey '76, the Independence Foundation Professor of Nursing and Associate Dean for Research and Doctoral Studies at the School. It is also expected that graduates of the program will become leaders in both the nursing profession and the health care system as a whole, she adds.

"The kinds of programs that medical research and nursing research focus on are different," explains Margaret. "Medical research has traditionally dealt with curing people. Nursing research deals with the curative aspects — how people respond to being ill, caregiving, health-promotion, disease prevention. These are problems that may be peripheral to the curative part of health care, but they're just as important from a patient's point of view. A lot of nursing research concentrates on helping people deal with the cards they've been dealt." Her own research, for example, explores how children cope with chronic illnesses.

The new Doctor of Nursing Science program has two areas of emphasis: chronic illness and primary care. The latter is a new area of research, making the Yale program unique among the nearly 45 nursing school doctoral programs nationwide.

The first class of doctoral candidates consists of seven students, including one from Thailand. One student is studying the care of the chronically ill; two are doing research on women's health and obstetrics; two are investigating psychiatric and mental health issues (albeit from different perspectives — one with a focus on policy, the other on home health care); and two are investigating aspects of AIDS. The students have been paired with School of Nursing faculty members who can mentor their research endeavors.

Five of the students are studying full-time, two part-time. The full-time students can earn their doctorate in four years — two years devoted to coursework, and two to practice and research — while part-time students can complete the program in seven years.

Starting funds for the new program were provided by the U S Public Health Services' Division of Nursing, Bureau of Health Professions. These funds will help provide the doctoral students with computers and study space, reports Margaret, adding that Yale was one of only two programs in the nation to receive funding for doctoral nursing education this year! "It's so exciting to see the program finally take off," she says. "The entire faculty is energized."

The first class of DNSc students. Front row (L to R) Kerry Milner, Carol Shieh, Elizabeth McGann; and back row (L to R) Joyce Shea, Sharon Eck, Wantana Limkulpong. Ruth Langlais, a part-time student, was unavailable for photo.
Orientation Week, 1994

Only a few short months ago the school year opened with the usual registration and orientation activities in full swing. New students were treated to the video, “YSN: Thought and Action,” an historic look at the people and programs that have brought us into the 1990’s. Dean Krauss delivered a State of the School Address, followed by tours of the Medical Center and Yale campus, and a lovely wine and cheese reception hosted by the Delta Mu Chapter of Sigma Theta Tau. The next day a presentation by several faculty members, moderated by Associate Dean Margaret Grey, on faculty research and possible student involvement, preceded student-run workshops presenting opportunities for students to become involved in community efforts in partnership with the city of New Haven. A picnic at Yale Golf Course concluded the formal part of the orientation and students, faculty, and staff enjoyed the chance to socialize informally. These planned activities are a very important part of the student experience here and encourage new students to become integrated into our community. Returning students are also invited to attend all events.

Hope Renn ‘97 speaks for herself!
(L to R) Beth Judge ‘96 and Kathleen Mahoney ‘97 wade through the paperwork.
(L to R) Bob Hill ‘97, Frank Palin ‘96, and Deborah Lynn ‘97 get to know each other.
Ju-Lu Huang ‘97 is from Taiwan and one of our five foreign students this year.
She may never know the impact she has had on health care in America. Her name is Gulina Brown; and, when she sought care for the pregnancy and delivery of her fourth child, Peter Christopher, she received that care directly from a nurse-midwifery student who is now reflecting on that experience. One would like to believe that Ms. Brown was not sensing the nervousness of the student, that she was not amused or annoyed by the compulsive thoroughness of this novice, or that she was not at all concerned about the student's inexperience. But, she most likely was. She had been here before. She was a woman using the public health care system, and she knew that along with this system came the trainees and the novices. Yet, she never expressed concern. She was patient with the apprentice's deliberateness; she was friendly in their interactions; and most effectively, she showed confidence in the ability of this novice to assist her in the care of herself and her baby. This student may have been helping her in some way, but more to the point, she was teaching the learner. She was, in the process of having her fourth child, actually giving birth twice — once to the newest member of her family and once to a young nurse-midwife about to launch into a career.

Ms. Brown is one of the thousands of individuals in the United States who each year have their health care delivered by a sea of novices. Whether it is nurse-midwifery students, junior surgical residents, medical-surgical nursing students, or third-year medical students, there are many individuals training for the health care professions who would not have a career were it not for Gulina Brown and people who, like her, willingly, or in many cases unknowingly, receive their care from those just starting in their careers. People receiving health care within the public system are, for the most part, the source of experience for professionals in training.

Certainly, this health care educational system is a two-way street. The people who receive care within this structure are for the most part receiving free care, and, arguably, some of the best care this world has to offer. At the same time, however, they are offering much to this system. They are the foundation on which health care in America stands. Yet, the credit they receive or the acknowledgment they garner is minimal. Indeed, these individuals are often criticized, admonished, or categorized, with expressions such as "welfare person" or "clinic patient" being tossed around with little thought to the implications of these labels. The respect and gratitude that clients in the public health care system should receive for their role in health care delivery in the United States seldom has been recognized or offered.

There are many issues that could arise from this reflection, when medical students are introduced as "Doctor So-and-So," is that informed consent for the client receiving care? When whole clinic populations are enlisted into research studies without individual solicitations of consent, is that ethical? And when beginning practitioners take their first jobs in public health care systems so that they can gain the experience they perceive to be necessary before opening a private practice, is this fair and equal distribution of health care across society? Certainly, these questions need to be addressed; but answering them is less a tribute to those receiving public health care in America and more a critical assessment of the system as it currently exists. No matter what the structure, health care professionals need to reflect on those individuals upon whose collective back rests the system of health care delivery in America, and we need to respect and thank them for their contributions.

So thank you, Gulina Brown. I was the student who had the honor and pleasure to work with you and learn from you. Thank you for believing in me, for trusting me, for training me, and for doing this with so much on the line — the health of you and your baby. As we re-examine health care in this country, I can only hope that among the voices of political lobbyists, insurance and pharmaceutical companies, medical societies, nurses' associations, and the hospital industry, we hear your voice and the voices of those like you on whom so much of health care relies. For without you, midwifery care in America — indeed, health care in America — would not be recognized for all of the accomplishments in caring for others that have occurred.

Unlike the recipients of many editorial tributes, Gulina Brown is not being eulogized, but is very alive and quite well. She remains one of the individuals I respect most in the world. As is true with most midwives recalling their first few attended births, I will never forget Gulina and the experience we shared together. I could have had no better teacher. Today, she is the hard-working mother of six children and the grandmother of one. Her fourth child, Peter, is in school and doing great. Now that is the public health care system and nurse-midwifery education at their best.

Acknowledgment is extended to Ms. Brown for granting permission to use her name for this writing and for all of the assistance that she has offered.

Jim Fain Leaves; Cassy Pollack Takes Over

After nine years as a faculty member at YSN Jim Fain has left to join the faculty of the University of Massachusetts, Worcester Campus, as Director of their Doctoral Program. Jim has made an indelible imprint on the stability and ongoing development of the Program for Non-Nurse College Graduates and has taught statistics to literally hundreds of YSN students, many of whom acknowledged him to be one of the best teachers they had ever had. At a reception held in his honor on October 13, 1994, Dean Judy Krauss presented Jim with a lovely Yale mirror and Eileen Whyte '95 gave him a YSN sweatshirt and photograph of her Three Year Program class. In making the presentation Judy stated, “His contributions to the YSN community were many and varied and he will be greatly missed by his colleagues and the students whom he so unselfishly taught and counseled in his role as Associate Dean.”

Cassy Pollack has taken over the reins from Jim and has agreed to serve as Associate Dean for Students and Master's Studies. She also coordinates the Program for Non-Nurse College Graduates and teaches in the Nursing Management and Policy Division. As if that weren't enough, Cassy commutes to Baltimore every week where she is enrolled as a fulltime student in a doctoral program at the University of Maryland. In announcing her appointment Dean Judy Krauss stated, “Cassy brings to the position a wealth of organizational and management expertise, incredible energy, and some creative ideas concerning recruitment, development, and student well-being.” The transition has been a smooth one. Cassy recently commented, “This is an exciting time to assume the roles and responsibilities of this office as we celebrate 20 years of admitting students to the Non-Nurse Program, and as the health care environment changes, we continue to position ourselves at the forefront of advanced practice nursing.”

Jim Fain accepts a farewell gift from the Dean.

Eileen Whyte '95 presents a YSN sweatshirt from the students.

Students Joe McDonough '96, Elizabeth Marlow '96, Veronica Smith '96, and Rebecca Froines '96 wish Jim well.
DIVERSITY IN NURSING

Dorothy Wholihan '89 provides a compelling narrative, relating her experiences as community health nurse and educator in a remote village in Kenya. Wholihan's article, first published in Home Healthcare Nurse, reveals her as an exemplary model of the nurse practitioner, making a difference, because of her sensitivity and adaptation to diverse cultural beliefs, perspectives, and practices. Her appreciation and acceptance of others with different values, lifestyle, and religious system; her understanding of family roles; and the meaning of health and illness to the family unit are woven into the content of this factual account.

Home Health In Rural Kenya
by Dorothy Wholihan '89

Despite the many environmental and cultural differences, many similarities exist between home health nursing in Kenya and the United States. Family-focused care is the goal, with emphasis on education and prevention.

The Matoso Clinic is located in a remote village along Lake Victoria on the border of Kenya and Tanzania. Tucked in this far corner of the country, the Luo people have been bypassed by many of the modern developments that have helped Kenya progress. There are no paved roads, no electricity, nor running water. The people live in ways similar to their ancestors who moved down the Nile to this lake 200 years ago. They depend mostly on fishing and farming, and live in one-room mud houses with roofs of thatched straw. Many rely heavily on traditional healers for healthcare.

My husband and I moved to this isolated but scenically beautiful lakeside environment for two years of work. As a nurse and a businessman from Manhattan, we are far from home! Hippos grumble 50 yards from our front door. Bats, lizards, and snakes occasionally find their way to our bedroom. Yet the Luo people have generously and warmly welcomed us. We are now part of the community here, playing on the village soccer team, present at area social functions.

The Matoso Clinic operates a successful outpatient dispensary. Sponsored by the Lalmba Association, an organization from

Dorothy Wholihan shares a moment with health workers at the clinic.
Colorado, it has provided basic medical care to the area for eight years. Supervised by an American physician, a staff of 22 Kenyans work daily to provide basic medical services, from simple laboratory tests to antenatal care. The major diagnoses are malaria, diarrheal diseases, and sexually transmitted diseases, as well as illnesses specific to tropical areas, such as schistosomiasis and various intestinal worms.

As a nurse with experience in community health and education, I was asked to develop and coordinate the health education activities associated with the clinic. At Matoso, we believe that preventative education is the most important contribution we can give the community. Teaching is performed by our staff at markets, schools, and mobile vaccination clinics. We teach wherever people gather: at churches, funerals, and local chiefs’ meetings.

The Home Visiting Program is an important means of spreading health information. In addition to nurses, two health educators visit area dalas (home compounds) each afternoon. Although neither woman has completed formal education past the sixth grade, they have received extensive training by American health volunteers. They are “Mama Truphena” and “Mama Jenifa” (“mama” is a term of respect for mature Luo women). Referrals to the home visiting program are made through the clinic practitioners or by word of mouth in the community.

There are many similarities between home visits in Kenya and home health nursing in the United States. Family focused care is our main goal, reflecting the holistic priorities of American nursing. Initial visits are structured similarly, including thorough assessment as well as planning. However, documentation is much less burdensome here. The community maintains an oral tradition, and literacy rates vary. We have developed a simple one-page referral and documentation form, based on the nursing process. It outlines assessments, interventions, and plans. Although interactions occur in the tribal language Dholuo, documentation is written in English, the official language of Kenya (as is Kiswahili). Monthly meetings of the home visiting team serve as brainstorming...
sessions to discuss complex cases and review progress.

The basic principles of nursing care are similar in the United States and Kenya, yet the unique environment and culture in Kenya lead to many fascinating differences. In such a remote area, technologically advanced medical care simply does not exist. The nearest hospital is 1-1/2 hours away over rough roads, sometimes impassable in the rainy season. Although basic surgery is available at this district facility, there are only two doctors and three professionally trained nurses for more than 200 patients. Complex interventions are limited, and it is reflected in the home healthcare: dialysis, chemotherapy, and suprapubic tubes do not exist.

The home visitor in rural Kenya focuses mainly on education and referral. If a child is chronically ill with recurrent malaria, a referral to the clinic is initiated for laboratory confirmation and treatment. In-depth education regarding the causes and prevention of malaria is begun, as is nutritional counseling and teaching on proper use of medications.

Home visitors may return as frequently as they believe necessary for continued teaching and monitoring. Although a minimal fee is charged at the clinic (approximately 25 cents for examination, laboratory work, and medicine), all home visits are free of charge.

A typical afternoon may consist of visiting two to four homes, depending on distance. All visits are made by foot or bicycle. It is not unknown for our particularly hearty home visitors to bike up to 20 km to visit specific referrals. Arranging visits beforehand is difficult since there are no telephones. Home visits are planned to avoid major market days, school sports events, and election campaigns—all days on which people are traveling. The Luo people are known for their courtesy and hospitality. It is unfathomable that someone might refuse to welcome a home visitor. In fact, often neighbors are called from other dalas to hear the teaching.

The home visit is usually an active affair. It is commonly conducted outside since the mud houses are small and cannot accommodate the number of people who attend. Extended families live together, and polygamy is the norm. A specific home may consist of a man, several spouses, and their children and grandchildren. Furthermore,
despite nationwide family planning efforts, large families remain desirable. Six or seven children are usual. One can see that a home visit in this quiet, isolated area becomes a big event with participants who are always raptly attentive.

One health issue addressed at every home visit is home hygiene. The major goals for each dala include a garbage pit, a dishrack (to keep washed utensils out of the dirt and away from livestock), and a pit latrine. Proper sanitation remains a major concern in an area where the bush is commonly used for toileting, and diseases such as cholera and typhoid are unfortunately all too common.

Similarly, clean water is a luxury for most people. Women may spend a significant part of each day carrying water from the lake. It is common to see a child washing or drinking at a muddy roadside puddle. Firewood is very dear and thought to be wasted on boiling water. Demonstration and repetition about the connection between dirty water and disease is constant. Our teachers also encourage an alternative system of using ultraviolet sunlight to help cleanse water, an imperfect compromise, but realities here often prevent optimal solutions to basic health problems.

Childhood malnutrition is another issue addressed by Matoso home visitors. In this situation, the "modern world" has intruded and is leading to significant health problems. Nile Perch is the most populous fish in Lake Victoria and was once the staple protein in the local diet. Recently, this sweet white fish has become the rave of Israeli and European restaurants. Consequently, all fish are now sold to refrigerated trucks and exported, while the local children subsist mostly on porridge or dough made of cornmeal. Home visitors assist mothers to identify and prepare alternative sources of protein and vitamins.

Highly publicized in the West, the Sub-Saharan acquired immune deficiency (AIDS) problem is perhaps our major concern at Matoso. The long latency period of the virus, combined with the existing sexual social structure (polygamy and extramarital intercourse is almost universal), makes for future tragedy.

Recent information obtained from our district hospital shows an approximate 25% human immunodeficiency virus (HIV) positivity rate among healthy blood donors. This figure shocks local Kenyans, who are becoming increasingly aware of the facts about AIDS, but who deny that the problem exists in their individual
here in rural Kenya. At first glance, these needs may appear overwhelming. However, the culture is so inviting, and the small successes so indescribably fulfilling, that I am thankful every day for the opportunity to work in this fascinating environment.

Dorothy and her spouse have returned to the States and currently reside in New York City with their daughter, Lola Elizabeth, born in March, 1994.

Call For Articles

It is compelling, inspiring, even somewhat romantic, to read of Yale nurses making a difference in foreign lands. But what about you, practicing in culturally diverse sites right here in the United States? Are you saying to yourself, “What I am doing is just as different! What I am doing is just as fraught with obstacles, frustration, and rewards! Just as challenging! As culturally diverse!”?

The American “melting pot” theory appears to be a myth. Today the United States is a multi-cultural nation with unique family structures, traditions, and values. It is no longer simple to describe a traditional American way of life.

By extension, how does one think of, define, traditional nursing? For many, nursing is moving away from an in-hospital concentration to vastly different non-traditional settings. Some obvious examples leap to mind: Native American health clinics, the California illegal alien health concerns, the needs of the Haitian community in Miami, the less visible school-based health clinics, in-community substance abuse programs, the under-served rural poor. Although health care in the United States is available for many of the under-served, people may not use it due to their own cultural beliefs, values, lifestyles. Research is needed to understand the relationship between more traditional health care delivery systems and cultural considerations that result in under-utilization and poor health.

Tradition at YSN is that Yale nurses are on the cutting edge, providing leadership, directing change, serving the under-served. We invite you, through this Diversity feature, to inform us, and share with your fellow alums what you have given and gained in diverse practice arenas. Please send your articles to Barbara Reif, c/o the School, and we will be pleased to include them in upcoming issues.

Where is the Kenyan home healthcare program heading? The future of the AIDS problem is influencing our direction. All our educational programs are now emphasizing more small-group discussion to try to translate the facts about AIDS into the reality of how it can affect individual lives. We are aiming to assist in the development of appropriate behavioral change.

In addition to our preventative work, we anticipate the need to develop a home care program specifically to meet the needs of the growing number of people with AIDS. Many people from towns and urban centers who left home seeking employment are now returning to their villages to die. We are planning a hospice home care program to provide supportive medical and nursing care for these homebound individuals. Staff are currently undergoing training in AIDS counseling to be able to provide the needed emotional support.

The specter of AIDS looms ominously against the background of the many other health problems communities. The social stigma of AIDS is severe. For example, a woman may be banished from her home and children by her co-wives if she is suspected of having AIDS. Moreover, death by AIDS is usually thought to be caused actually by “chira” (magic). People who marry before their older siblings or speak disrespectfully about the dead may be “cursed” by a wasting disease. In an area of high infant mortality and limited lifespan, death is known to all. Funerals are the most common social function, often elaborate and extending for weeks. Yet, historically, understanding the medical cause of death has not been possible, and so it is not a priority, and beliefs about supernatural causes of death run very strong. Identifying and combating AIDS as a common threat is a difficult and ongoing task for the Matoso health team.

Marjorie Funk '84, Associate Professor and Coordinator of the Cardiovascular Specialty in the Medical-Surgical Nursing Program, received the American Heart Association Council on Cardiovascular Nursing’s New Investigator Award at the 67th Scientific Sessions of the American Heart Association in Dallas, Texas. This prestigious award is designed to foster the professional growth of new investigators by recognizing their contributions to the understanding, prevention, and treatment of cardiovascular diseases. Marge’s study was entitled, “The Relationship of Gender to the Use of Cardiac Procedures in Patients with Acute Myocardial Infarction.” Her Co-Investigator was Kate Griffey '93, a staff nurse in the Coronary Care Unit at Yale-New Haven Hospital.

Gail D’Eramo Melkus, Program Director of the Adult Nurse Practitioner Program, was elected to chair the National Certification Board for Diabetes Educators.

Paula Milone-Nuzzo, Assistant Professor, has agreed to take on the role of Acting Chairperson of the Nursing Management and Policy Division. The Division was formerly called Nursing Systems and Policy. Paula has served as a member of the Division since its inception and is intimately familiar with its workings. She will, of course, continue to provide leadership for the home care programs within the Division.

Geralyn Spollett, Assistant Professor in the Adult Nurse Practitioner Program, has been awarded the American Academy of Nurse Practitioners’ State Award for Excellence! As a result of this recognition, and in honor of National Nurse Practitioners Week, YSN has received a proclamation signed by Connecticut Governor Lowell P. Weicker which will be displayed in Geri’s honor.

Ann Williams ‘81, Associate Professor, was selected to receive the Connecticut Nurses Association Virginia Henderson Award for Outstanding Contributions to Nursing Research. She was honored at the Diamond Jubilee Banquet held October 19, 1994 but was out of the country at the time of the banquet. Dean Judith Krauss accepted the award on Ann’s behalf.

Ann Williams ‘81 (second from right) with an international group of nurses attending the International AIDS Conference in Yokohama, Japan, August, 1994.

Associate Dean Margaret Grey ’76 was selected as one of only 25 top nurse investigators from around the country to present at the second annual gathering of the Friends of the National Institute of Nursing Research. Margaret’s research was showcased at a Poster Session and luncheon for members of Congress and their staffs as well as invited new investigators.

Dean Judith Krauss ’70 was elected to Fellowship in the American Academy of Nursing and was inducted at the Academy Meetings in Phoenix, Arizona on October 22, 1994. Judy’s election represents leadership in the field of psychiatric nursing, policy, nursing education and advanced practice. Bravo! In addition, Judy is the recipient of the “1994 Jeanette G. Chamberlain Psychiatric Nursing Service Award.” This distinguished award is given by the Society for Education and Research in Psychiatric-Mental Health Nursing to a psychiatric nurse who has contributed to the advancement of the field through public service, administration, development of healthcare policy, and other service activities.
Courtney Lyder Joins YSN Faculty in Gerontology Specialty

Courtney H. Lyder, RN, ND, has recently joined the Yale community as Coordinator and Assistant Professor of gerontological nursing at YSN and as a gerontological clinical nurse specialist and Coordinator of the Geriatric Resource Nurse Program at Yale-New Haven Hospital.

Courtney holds a bachelor's degree in psychology and nursing with a minor in biology from Beloit College, a master of science degree in gerontology, and a doctor of nursing degree in gerontology from Rush University, the academic component of Rush-Presbyterian St. Luke's Medical Center in Chicago.

He has held faculty/research positions at St. Xavier University, Triton College, and the University of Illinois at Chicago. Additionally, he has held clinical positions as a gerontological nurse practitioner at Share-Evercare (an HMO for the elderly) and Rush-Presbyterian St. Luke's Medical Center.

Courtney has researched and published on a variety of topics in geriatrics and gerontology — decreasing back injuries in nursing home staff, treating pressure sores, perineal dermatitis in the elderly, and sexuality. His current research interest focuses on minority elderly, specifically African-American and Latino-American elders. He believes there continues to be a significant dearth of clinical research in geriatrics addressing both populations and recently submitted a National Institutes of Health (NIH) grant to test the validity and reliability of the Braden scale in predicting pressure risk in African-American and Latino-American elderly.

In May the School of Nursing was awarded funds by the federal Department of Health and Human Services to expand the gerontological nursing specialty. Courtney, Project Director for the grant, and other members of the faculty will develop and implement this specialty within the next year.

It will be the first gerontological nurse practitioner program in Connecticut and will focus on the assessment and management of the elderly in primary care settings.

Professor Lyder has also begun to meet with many of the geriatric resource nurses at YNHH and says a major reason for accepting the position at Yale was due to the new program.

"(It) provides talented and dedicated nurses who have developed an interest in the care of elderly an opportunity to increase their own understanding and teach others about the special needs of the elderly," he says, "thus promulgating greater advocacy for this potentially vulnerable population."

Professor Lyder encourages anyone interested in geriatric/gerontological nursing to contact him regarding either the geriatric nursing specialty at Yale School of Nursing or the Geriatric Resource Nurse Program at Yale-New Haven Hospital.

"Limited Means ...Unlimited Devotion"

This is how an alumna describes her financial circumstances and commitment to the School. An 80 year old living in Memphis, Tennessee, she is a loyal supporter of the School's annual giving program, but she was hoping to make a truly significant gift.

She was delighted to learn that devoted alumnae/i can make substantial contributions without decreasing their incomes.

After talking with her financial advisor, this alumna made a $40,000 cash contribution to the School of Nursing through a gift arrangement called a Charitable Gift Annuity. She now receives $3,920 a year guaranteed for her lifetime - an annuity rate of 9.8%. More than half of her annuity payments come to her tax-free, and she was entitled to a federal income tax charitable deduction of nearly $20,000.

The results? This alumna has made a larger gift than she ever thought possible, and the School has benefitted greatly.

PLEASE TURN THE PAGE FOR MORE GIFT OPPORTUNITIES OFFERING MUTUAL BENEFIT.
You and Your School —

The Charitable Gift Annuity on the previous page is just one example of several gift options. Please consider the following illustrations:

• A 55 year old graduate makes a $10,000 gift to a Deferred Payment Charitable Gift annuity in which guaranteed annuity payments to her will begin at the future date of her choice. Because she plans to retire at age 65, she specifies that income payments to her are to begin at that time.

  Result: She is entitled to an immediate federal income tax charitable deduction of about $5,200. And, starting at her 65th birthday, she will receive exactly $1,600 each year for the remainder of her lifetime - an annuity rate of 16%.

• A 65 year old alumna recognizes the benefits available from making a gift and receiving an income, but she has limited capital and needs to retain it in the event of an emergency.

  Result: She includes the School in her will and she receives both Campaign and Reunion Gift fundraising credit for a portion of the current value of her bequest intention.

• A 72 year old alumnus with a 70 year old wife wishes to make a gift of highly-appreciated, low-yielding stock to a life-income gift arrangement in which his income is likely to grow.

  Result: He makes his gift to Yale’s Balanced Pooled Income Fund, similar to a mutual fund, which has historically distributed income at an annual rate of about 6% with income growth averaging 4-5% a year. In addition to receiving a lifetime income for himself and his wife, he is entitled to a federal income tax charitable deduction, and he is not liable for a capital gains tax on the transfer of his appreciated securities.

• A graduate plans to leave his house to the School in his will but he would like to obtain some lifetime tax benefits for his planned gift.

  Result: He deeds his house to the School now but retains the right to full lifetime use. He is entitled to a federal income tax charitable deduction in the year he gives his house. If he decides at some future time that he no longer wishes to remain in his house, he and Yale can jointly sell it, and he will receive a portion of the sale proceeds.

To obtain more information about these gift options, please call the Yale School of Nursing Alumni/ae Fund collect (203-432-5855) or complete and return the reply form.
Partners Through Giving

Yale School of Nursing Alumni/ae Fund
P. O. Box 1890, 55 Whitney Ave., New Haven, CT 06508

Please send me information about the following gift options:

Cynthia Flynn '96, currently a first-year midwifery student who works in the Postpartum Unit at Yale-New Haven Hospital, and is a founding member of DONA, Doulas of North America, taught a professional labor support workshop the weekend of October 22-23, 1994. The workshop provided intensive labor support skills for those wanting to provide the highest quality labor support to birthing women and their families.

Patrick Cunningham '96 was recently honored as the recipient of The Virginia Henderson Nursing Award for Clinical Excellence at Yale-New Haven Hospital. The award was presented by Diana Weaver, Senior Vice President for Patient Services. Marge Meglin, the nurse who nominated Patrick, said, "To watch Paddy with his patients is to see the art and science of nursing."

Christine (Tina) London '95 and Josefina Pereira Marquez '95 were recently honored at a reception for the 1994 Wilbur G. Downs International Health Travel Fellows, a fellowship program sponsored by Yale Medical School which supports research and data collection efforts overseas. Tina and Josefina spent last summer as Downs Fellows in Brazil. Tina's study deals with labor management in Campo Alegre, an indigenous Amazonian community, and Josefina collected data on Brazilian homosexual and bisexual men as a bridge for HIV infection to low risk partners.

Brooke Karlsen '97 and husband are the proud parents of a 7 lb. 9 oz. baby girl, Elena Maria Karlsen-Ayala, born October 24, 1994.

The following students are recipients of new scholarships for the 1994-95 academic year:

- American Association of Critical Care Nurses
  Trischa Farmer
- American Legion Eight & Forty Nursing Scholarship
  Ann Kaisen
- Bay State Medical Center Auxiliary
  Stephanie Sherman
- LaBoure College Alumni
  Lea Ayers
- Leopold Schepp Foundation
  Melanie Morris
- Montclair Yale Alumni Association
  Brian Geyser
- National Health Service Corps
  Melissa Brown
  Miriam Gurniak
  Cynthia Harrison
  Jonathan Liebman
  Elizabeth Marlow
  Cynthia Schiff
- New Haven Yale Alumni Association
  Lauren Janush

Patrick Cunningham '96, winner of the Virginia Henderson Nursing Award

Lea Ayers
The Hope Project, A Joint Venture
by Mary Jane Linnehan '95

One year ago in October, 1993, students from the Yale School of Nursing (YSN) coordinated a community service project for the National Make A Difference Day. Together volunteers from Yale Schools of Nursing and Medicine (YSM) worked in renovating New Haven Home Recovery, a New Haven housing facility serving homeless mothers and children. During that day the students, New Haven Home Recovery staff, and the women and children residents of the house cleaned, painted, socialized, and laughed. In six hours, six family units had been renovated and a special relationship formed. Afterwards, YSN students brainstormed about how to establish an ongoing relationship with the house and its residents.

Following discussions with house staff and students, it was determined that the house could benefit from a weekly program of health care outreach and education. For the past three years students from YSN had already been coordinating a health outreach program at the Downtown Evening Soup Kitchen where they were providing basic health screenings, health education, and referrals. Planning began for a weekly outreach program to also provide basic health screenings, counseling, and referrals to residents of New Haven Home Recovery. After YSN learned of a program being planned concurrently at the Medical School targeting two other area shelters that served adults and adolescents, the planning phase of both programs quickly merged and became the HOPE Project.

In addition to those from YSN and YSM, students from Yale's other health professional schools were included in the planning. A critical factor in the development of the program was the administrative and faculty support provided by all these schools. Margaret Grey '76, Associate Dean for Research and Doctoral Studies at YSN; Robert Piscatelli of YSM and Hill Health Center; and Elaine Anderson of EPH have all served as advisors to the project. In addition, faculty are participating in a weekly lecture series on issues of the homeless and in preceptor roles at the shelter sites. The intent and the result of the planning was an interdisciplinary approach to community based health care. Working closely with staff from the Hill Health Center's Homeless Health Care Network and shelter staff, students are working toward a collaborative effort among Yale students and faculty, community health professionals and advocates, and, of course, those New Haven residents being served.

The HOPE Project will help supplement current outreach health care provided by the Hill Health Center. The goal is to assist individuals to enter the health care system and to obtain a primary care provider using project participants as an entry point into a more consistent source of health care available through the Hill Health Center. Additionally, the HOPE Project includes health counseling and education as a primary component of its goals. Working within a holistic framework, students will provide health information to their clients, tailoring the information to the individual's personal health needs. A client's living situation, economic status, and cultural preferences will be considered in the health education provided, using information that will be most sensitive and useful to individuals and families.

Jolanta (Jola) Orlowska, a registered staff nurse from Gdansk, Poland, is spending the fall semester at YSN as an exchange student sponsored by the American Foundation for AIDS Research. Jola works in an outpatient clinic in Gdansk treating people with STDs, including HIV/AIDS, and while at YSN is auditing courses in physical assessment, the care of HIV-infected children and their families, and home care. This is Jola's first trip away from Poland where she has a husband and son.
Nursing Research

Research by nurses is improving patient care, reshaping the health care system, and energizing the profession. Nurse researchers in hospitals, schools of nursing, outpatient clinics, and community health centers are identifying and studying hundreds of variables in health care, and evaluating the outcomes. The results have influenced quality of care, shortened hospital stays, and contained costs.

Since Congress established the National Center for Nursing Research in 1986, the field has flourished. However, as YSN alumna/i know, the research component has long been a hallmark of our professional education. As students, we learned to gather and evaluate data related to patient care and health care delivery, and to work for improvements in the system while always being attentive to the psychosocial needs of the patient.

We hope to establish a regular feature in the Yale Nurse highlighting the research and the researchers among YSN faculty, students, and alumna/i, and invite you to participate by informing us of your work. What follows is a description of a nursing research study to be conducted by Ann Williams ’81, and Sue Andrews ’83. It was recently funded by the National Institute of Nursing Research for $1.6 million over a three-year period and is an example of the high quality, timely research being conducted by YSN graduates.

PRIMARY CARE NURSING AND HIV GYNECOLOGIC MANIFESTATIONS
by Blanca Sckell

Yale School of Nursing has been awarded a three-year grant funded by the National Institute of Nursing Research. The study is headed by Ann Williams ’81, Principal Investigator and Associate Professor of Nursing, and Sue Andrews ’83, Co-Investigator and Associate Professor of Nursing and will be conducted in collaboration with Dr. Gerald Friedland, Director of the AIDS Care Program at Yale-New Haven Hospital. It will explore the feasibility and advantages of the use of local regimens for prophylaxis of vulvovaginal candidiasis in HIV-infected women. Vulvovaginal candidiasis is the source of significant distress and morbidity among HIV-infected women. Several approaches to management of this difficult problem have evolved, including aggressive patient education and vaginal hygiene, restoration of normal vaginal flora through the use of exogenous lactobacilli, as well as local and systemic antifungal prophylaxis. Little is known about the comparative effectiveness of these approaches in HIV-infected women, although women living with HIV infection are known to have high rates of vulvovaginal candidiasis. Given the large number of drugs prescribed for people with HIV infection, and the potential for significant drug interaction and concern regarding selection for antifungal resistant organisms, exploration of the efficacy of local regimens for prophylaxis of vulvovaginal candidiasis is called for.

The study will enroll and follow at least 400 HIV+ women, using a randomized double-blinded placebo controlled trial of three courses of prophylaxis, and will examine the relationship between immunosuppression, vaginal candidiasis, and efficacy of the nursing interventions. It will include HIV-infected women 18 years and older who are not planning to relocate within the next two years, and will exclude women with current vulvovaginal candidiasis infection, women receiving systemic therapy with antifungal agents, pregnant women, or those with a history of allergic reactions to the study medications.

In addition to her Co-investigator, Dr. Williams’s team includes Dr. William Lieber, Dr. Renee Frankle, and Dr. Blanca Sckell. The team will work in primary care sites in the New Haven community.

In concert with Yale’s encouragement of community participation in its research studies, a community advisory board will also be established, including women affected by the HIV-AIDS epidemic, and representatives of agencies providing services to women with HIV in the New Haven area. It will also include women with HIV infection. This advisory board will serve as a means for the community to review and comment on the research, as well as a source of information for the community about the progress of the study and related new findings.

Sue Andrews (R) with Harriet Ebert, RN, at the Nathan Smith Clinic, YNHH, the data collection site.
Elouise Collier Duncan ’46W was recently honored by her alma mater, Kean College, with one of its 1994 Outstanding Alumnus Awards. Elouise was the first black woman to graduate from Yale’s MSN program and was the wife of a Liberian cabinet minister. She has taught obstetrical nursing, was on the staff of the American Nursing Association, and was active in nursing education efforts in Liberia until 1980. She currently makes her home in Piscataway, but still finds time to visit Kean College.

At the Second Annual Gathering of the Friends of the National Institute of Nursing Research, held in Washington, D.C. in September, Rhettaugh Dumas ’61 was honored by a special President’s Award from the National Women’s Hall of Fame.

Penny Harmon ’80 was recently named Director of Midwifery Services at the Long Island Birthing Center. In addition, Penny was instrumental in establishing the birthing center, which is the first and only free-standing, New York State-licensed birthing center on Long Island.

Danuta I. Bujak ’81, doctoral student at NYU School of Nursing, Instructor of Medicine and Clinical Research Coordinator, Division of Rheumatic Diseases and Immunology at the New York Medical College, presented a poster, “Cognitive and behavioral changes induced by Lyme disease,” at the VI International Conference on Lyme borreliosis in Bologna, Italy in May. Danuta also presented a lecture on, “Ticks and Rabies,” at the 10th Annual Conference of the New York State Coalition of Nurse Practitioners at Lake George.

Jackie Jordan Baptiste ’82 successfully passed the oral defense of her doctoral dissertation, “Race and Attirition in Baccalaureate Nursing Programs: A Hermeneutic Inquiry.” Jackie has been enrolled in the doctoral program at Adelphi University while an Assistant Professor of Nursing at Western Connecticut State University. In 1993 she was awarded a $1000 Dissertation Award by Delta Mu Chapter of Sigma Theta Tau. Her PhD will be officially conferred in January, 1995.

Catherine (“Cate”) Moffett ’82 has joined the YSN faculty in the Adult and Family Nurse Practitioner Program, as well as being appointed to Yale-New Haven Hospital’s Primary Care Center. In addition to other clinical positions, Cate had directed Citibank’s efforts to provide primary care for their employees.

Rebecca Stockdale-Woolley ’82, Director of the Pulmonary Rehabilitation Program at the Hospital of St. Raphael, despite a running career of only two years, won the women’s masters division of the Fairfield Half Marathon in 1 hour, 22 minutes, 14 seconds. The race served as the 1994 USA Track and Field Half Marathon national championship for the women’s masters division.

Darlene Fortune ’85 has been accepted as a Candidate by the American Psychoanalytic Association (APA) and has started Psychoanalytic Training at the Florida Psychoanalytic Institute in Miami. She is the first Clinical Specialist in Psychiatric/Mental Health Nursing to be accepted as a candidate by the APA. She has been in full-time private practice in South Miami since 1986 and lives in Coral Gables with her husband, Ross Hancock III, and their two children, Emily and Miles.

Sheila Gillespie ’85 and Michael Gillette became the parents of John “Jack” Edward Gillespie on September 26, 1994. Jack weighed in at 7 lbs. 12 oz. and was 21” long.

Sandra Bacon ‘89, Psychiatric CNS, Partial Hospital Program, YNHH; Janet Parkosewich ’85, Cardiac CNS, YNHH; and Constance Donovan, Cancer Clinical Nurse Specialist, YNHH and former YSN faculty member, published a letter to the editor in the April, 1994 edition of Critical Care Nurse which critiqued the choice of research design of a study on nurse participation in the ethical decision making in a previously published article in the same journal.

Hemsley Stewart ’90 has been Director of Community Mental Health Services in Jamaica since December 1993. This program is community based with mental health officers assigned to all parishes where clinics are run for treatment of the mentally ill. While taking on this new position, Hemsley is still involved with nursing education, teaching almost all the nursing courses there, as well as being moderator and analyst for the new Regional Nursing Examinations which began in October, 1993.

Amy Gelband MacDonald ’91 has joined Janet Singer ’91, Valerie Hodenius, Ellen Israel, and Lainie Epstein at Women-Care, Inc. in Arlington, Massachusetts.

New Haven Court Clinic recently announced the appointment of Susan E. Devine ’91, as Director, and Madelon Baranoski ’74, as Associate Director of the Clinic. In addition to Susan’s responsibilities with the Court Clinic, she will also direct the Risk Management activities for the Connecticut Mental Health Center. In addition to Madelon’s responsibilities, she will continue in her role of Director of Education and Training for Yale Law and Psychiatry.

Liz Howard ’91 writes from Nashville that she recently accepted a job as Service Director of the faculty practice at Vanderbilt University SON. Liz and her husband are expecting their first child in November. She also mentioned that Wendy Warburton ’93 and Kristen Wooten-Walker ’93 have relocated to Nashville and both “are doing well and impressing all of us here!”

**Class News (cont.)**

Judy Chessin ’93, is a Geriatric Clinical Nurse Specialist at Yale-New Haven Hospital. Judy graduated from St. Joseph Hospital SON, Fort Wayne, Indiana in 1970 (diploma school), received her BSN from Fairfield University in 1988 and was in the Adult Psychiatric-Mental Health Nursing Program at YSN. She previously was employed as an instructor at both Fairfield University and Yale.

Marilyn McDonald ’93 is a Lecturer/Instructor at the Norwich University School of Nursing in Northfield, Vermont. She was also recently certified by the ANCC as a Gerontological Nurse Practitioner.

Sherrie Najarian ’94 had a baby girl, Alexandra, born October 5, 1994.

Kerry Rausch ’94 gave birth to Zachary Michael on September 5, 1994. Mother and father, Fernando, are doing fine as new parents.

Margot Secenj ’94 was married to Christopher James Ververis on October 8, 1994 in Sudbury, Ontario, Canada. Congratulations to the newly-weds!

**LETTER TO THE EDITOR**

A tribute to Evelyn Sturmer ’53

As an administrator and teacher of nursing staff of the hospital, Evelyn Sturmer ’53 was an inspiring example to me during most of the twenty-five years I worked at Yale-New Haven Hospital in the capacities of staff nurse, head nurse, and evening supervisor. Her treatment of each who worked with her was always courteous and respectful. She made each one of us feel a talented and worthwhile caretaker of the sick and taught us how to lead others in order to bring out the best they had to offer. She was a vivid and talented public speaker. It is still with a feeling of delight that I remember a few of her favorite speeches - about the sociological effects of alcohol, about the gypsies and understanding their customs when someone in their family is hospitalized, and, yes, perhaps most of all, about death and grieving and the customs in the different cultures and what we nurses could do to be most helpful to the bereaved families. Evelyn Sturmer exemplified for me qualities I hope will be more often representative of the nurse - education, teaching, dignity, with compassion and humanity. I shall miss her.

Mary Stack-Dunne, ’54

**IN MEMORIAM**

Ann Richardson Durand ’27 died on September 1, 1994

Ruth L. Fanselow ’31 died October 24, 1992

Bernice Laccount Cowan ’32 died August 21, 1994

Anita E. Angier ’36 died September 2, 1993

**YSN Program of Study Renamed**

The Nursing Systems and Policy Division at the School of Nursing has been renamed the Nursing Management and Policy Division. Paula Milone-Nuzzo, RN, PhD, is acting Division Chairperson and Program Director for the two programs of study housed in the Division: Nursing Management and Policy, and Home Care and Community Health Administration.

Reunions Scheduled For June 1-3, 1995

It is time to start thinking about your upcoming reunion! Although it may seem too early to begin to make plans to return to YSN and New Haven, it really isn’t. Time has a way of speeding by and before you know it, June will be here and Alumnae/i Weekend activities will be underway.

The Board has been developing a theme, “Building a Future on Shifting Sands,” for several months and is inviting speakers who will offer an interesting and timely Alumnae/i College program. Remember that Continuing Education Units are offered every year for those of you who need them. Ample time will be allowed for socializing, always an important part of the Weekend, and we urge you to contact your classmates early, encourage them to come to New Haven to reconnect both professionally and personally. The bonds that you have formed are long lasting and worth rediscovering. Treat yourself this year and make the effort to relive those special moments!

See you in June!

21
Dear Fellow Alums:

Congratulations and thanks once again to all who support YSN through the Alumni Fund's annual giving program. I am thrilled to report that we held, once again, our 54% participation record, and WERE NOT SURPASSED BY ANY OTHER GRADUATE OR PROFESSIONAL SCHOOL!

The Dean, the faculty, and students also wish to extend their thanks with this public acknowledgement of your continuing generosity. Our special gratitude extends to the hardworking and loyal class agents without whom we could never brag of such success.

Mary Jane Kennedy '68  
Chairperson  
YSN Alumni Fund

NOMINATION FOR DISTINGUISHED ALUMNAE/I AWARDS 1995

The tradition of honoring outstanding alumnae/i was started at the time of YSN's 50th Anniversary celebration in 1973. It is a very special opportunity to honor colleagues and classmates who have distinguished themselves with special talents and achievements. The YUSNA Board again solicits your nominations of YSN alums who you feel should be recognized in this way. These awards will be presented at the Reunion Banquet in June. The deadline for receipt of your nomination is March 1. Please send all nominations to Barbara Reif at the above address.

Review the criteria below and provide as much specific information as possible to indicate the ways in which your nominee meets these criteria. You may wish to solicit help from your friends or colleagues. A curriculum vitae would be helpful, if one is available. The committee will also seek additional information on nominees where necessary.

Criteria for eligibility for nomination:

Achievement in and outstanding contributions to any of the following categories:
- Teaching and scholarship
- Clinical practice
- Leadership
- Research in clinical nursing
- Community/Society
- YSN growth and development

Explanation:

1. How is the achievement or contribution beyond the normal expectation of the activity or position?
2. How is the achievement or contribution unique and innovative, having more than local impact?
3. Describe how the service to YSN/community/profession is continuous and sustaining.
4. How do the activities contribute to the development of new dimensions and directions in nursing?
